## Gmail contacts edit

In Gmail, select the Apps icon in the upper-right corner, and then select Contacts. Alternatively, go to and sign in if necessary. This article describes how to find, open, and use Google contacts in any browser that accesses the desktop version of Gmail. Follow the steps below to open your Gmail Address Book in a desktop browser. Emilie Dunphy / Lifewire Open Gmail. Select the Apps icon (it's located in the upper-right corner of the Gmail screen). Select Contacts to open a new window with all your email addresses in. <https://contacts.google.com/> in your browser URL bar to open the Gmail contact screen. One of the things users like most about Gmail is that it's easy to use with other Google products like YouTube and Photos. Here are some useful features that make it easy to manage contacts in Gmail: Track contacts: Keep track of people you often contact and add them to a frequently contacted list. You can then add these people to your main contact list. This makes it easy to send email to multiple contacts at once. Organize information: Merge information and details that your contacts choose to share automatically. Automatically clean up duplicate contacts: To check for duplicates, on the left panel of the Google Contacts screen, select Duplicates. Group contacts together: For example, to keep your business contacts separate from your personal contacts or create a mailing group for a specific project you're working on, so you can easily send them all at once. Manage Contact List: Import, export, and print an entire list of contacts. Thank you for telling us! Tell us why! Dang, Gmail really steps it up these days. First IMAP support, and now a new version is being released that includes pre-retrieval of messages for faster performance, a new contact manager, and more keyboard shortcuts. The official Gmail blog writes: Click to viewless than two years after the beta version, Yahoo Mail has started rolling out of ... Read more Even on a fast Internet connection, it can take a second to request and render a new website, and when you read a lot of mail, these seconds can accumulate to hours waiting for email to load. We have spent a lot of time profiling all parts of the application, shaving milliseconds of where we can. Some of the most common actions should be faster now. For example, prefetch messages in the current view, so when you open an email your browser does not need to talk to Google's server; it only displays the message. These techniques really shine on newer browsers and computers. Using an alpha version of Safari 3 on a MacBook, we see sub-200ms times when you open messages - pretty quickly. Although Gmail itself doesn't look so different, the renewed contact manager does. Here's a screenshot of the new, much more usable layout: It has searches that you type: G O Media can get a commission 68% of 2 Years + 3 Months Free You can also easily add a filter based on a message sender using the reply drop-down list drop-down list in the top right of a message, as shown. Overall, the new Gmail is definitely faster and got some much-needed improvements that you'll see over the coming weeks as well. But ... Catch The Better Gmail Firefox extension developed here at Lifehacker is not yet compatible with the new version of Gmail, but we are working on it. Thank you for your patience as we work to get the upgrade out the door. In the meantime, if you've enabled the new Gmail user interface, you may need to turn off the Better Gmail extension. Alternatively, to use the Gmail-compatible version of Gmail, click the Older version link at the top of the page in your Gmail account. Click to show Gmail is good, but it may be better. We've featured several Greasemonkey scripts... Read more For more screenshots and information, check out the Google Blogscoped link below. Code changes to prepare Gmail for the future [Official Gmail Blog] Gmail 2.0 Screenshots [Google Blogscoped] Although you may not be able to contact Gmail support directly without subscribing to G Suite for business, there are a couple of ways to get the answers you're looking for online. Let's look at how you can get help with your Gmail problems. Using Gmail General Support Help The first resource to look at is Gmail Help, a Gmail-specific support page loaded with solutions for the most common issues. Once you've reached the Gmail support home page, you can browse some of the more frequent help topics facing Gmail users. If you click one of the topics, you'll see a list of articles to help you troubleshoot your problems. When you click on any of the articles, you are redirected to a page with step-by-step instruction on how best to resolve this issue. The page also includes the steps for Android and iOS as well. If you can't find a topic that answers your question, there's a search box at the top of the page you can use to describe your problem. If you have a more specific, less common problem, visit the Gmail Help Forum to get the help you need. Using gmail help forum for specific topics The next option is to go to the forums, where people go to ask specific questions about problems with Gmail accounts. The forum is filled in with other Gmail users, as well as Google employees. You can access the forum from the Gmail help page (click the Help Forum link in the top right corner), or by going directly to the Gmail Help Forum page. When you get to the forums, scrolling shows down the latest questions that have been asked by the community. Like Google Help, you can use the search bar at the top of the page to find any relevant questions users have already asked. As with most forums, it is considered good form of trying to search for your problem to see if a solution has already been posted. After that, if you still haven't found a solution to the problem, you can create a new topic. This you sign in to your Google Account and publish a question publicly in the forum. This allows all other users to respond with a relevant solution, and if you're lucky, a Google volunteer can help you further. To do this, click the New Topic button. On the next page, explain the problem you have, along with photos, links, or attachments that can help the other forum members fix the problem. After you enter all the details, click the Publish button. If none of these resources come closer to solving your first problems, you can always send a letter to Google. Their website displays the address of every Google headquarters in the world. Surely they'll answer an actual letter, right? Gmail may be the world's best online email service, but that doesn't mean it's perfect. It has a big drawback: you can't really customize it. That's where Better Gmail 2 comes in. It's a Firefox add-on that offers many types of customizations, including letting you decide if and how to show Blind CCs, what information the sidebar should display and omit, such as hiding the spam count, how to view your messages, and more. One of my favorite features is also one of the more subtle. When you have an attachment, not only does the generic attachment icon appear, but display an icon that identifies the attachment, such as the Word icon for Word documents. In addition, it appears at the top of the Firefox tab, not only the total number of messages you have, but the number you haven't read. Better Gmail 2 is an update to the original Better Gmail extension, written to work with the overhaul that Gmail was given after the original extension was written. So, for example, it kills its skins function because Gmail even now has skins ability. It has also solved a number of issues that the original Better Gmail extension had when working with the new Gmail interface. Note: This link takes you to the author's website, where you can download the latest version of this Firefox-only software.--Preston Gralla Note: When you buy something after clicking on links in our articles, we can earn a small commission. Read our Partner Link Policy for more information. Google has undergone some aesthetic overhauls lately. First, they whip iGoogle into a theme, paneled frenzy. Now Google has added a color cluster to their Gmail inboxes. Google has unveiled more than 30 themes, and says more are on the way. You can showcase your Gmail account with a natural theme, retro notebook look, or weather-based theme. Most palates look nice, and some of the styles are busier than others, but none of them seem too distracting. None except Terminal one, that is: Google says it's an old school ASCII theme [that] was the result of a bet between two engineers. Yet I think its awesomeness outweighs its impracticality. To change your inbox, go to Gmail's settings and note: When you buy something after clicking on links in our articles, we can earn a small commission. Read our Partner Link Policy for more information. Details.
